

2010 HESNI Presentation Proposal

Company Name

Epstein

Speaker Name, Brief Biography & Photo

John R. Patelski, P.E., LEED AP

Executive Managing Director, President, Engineering & Construction

Education

Milwaukee School of Engineering, BS with High Honors, Electrical Engineering, 1980

Biography

John currently serves as Executive Managing Director and President of the Engineering and Construction Groups of Epstein (A. Epstein and Sons International, Inc.), the Chicago-based firm that provides full service architecture, engineering, construction, interior design and graphic design expertise to clients worldwide. He has steadily advanced within the organization over a 17-year period in recognition of his ongoing success in growing and diversifying the firm to continue to meet the demands of the design, engineering and construction industries into the 21st century. He works closely with the rest of the Epstein executive team to determine the goals and strategic course of the overall organization, globally. John began his over 30 year career as an electrical engineer and has built upon that foundation to become well versed in a variety of key business issues including engineering, supply chain strategy, logistics, sustainability and LEED, construction, business development and overall company management.

John has been an Instructor, Guest Speaker and nationally recognized subject matter authority on a wide variety of technical topics including sustainable design and LEED certified facilities, the real estate development process, trends in new economy buildings, supply chain management, electrical systems design, design/build, and raising the roof to creatively renovate properties. He is a licensed professional engineer in 40 states and a LEED Accredited Professional.

Presentation Title

Green Buildings and Green Operations...Do they really make financial sense?

Summary and Goal of the Presentation

In this presentation Mr. Patelski will address the timely, but difficult topic of what sustainable design and "green" operations mean to the bottom line. The goal is to clarify the economic benefits of sustainability.

Bulleted List of Key "take-away" Points

- ◆ Latest Trends in "Green Buildings"
- ◆ Public Policy Issues
- ◆ The Differences with the new LEED Version 3 Rating System
- ◆ The costs to incorporate Sustainable Design techniques and LEED ratings into your project or existing facility
- ◆ Financial benefits of Sustainable Design and LEED certification
